

Microsoft Internet Explorer Runtime Error Fix

Contributed by admin
Sunday, 09 November 2008

As its name clearly describes it, the unknown runtime error is an unknown error. It is extremely rare, and very few people have experienced it. Even Windows did not bother to give it a name or any details on it. The error is entirely generated by faulty registry. In order to prevent it from showing, make sure you constantly use a registry cleaner!

What is the registry?

The Windows Registry is a central hierarchical database used in Microsoft Windows 98, Windows CE, Windows NT, Windows XP, and Windows 2000 used to store information that is necessary to configure the system for one or more users, applications and hardware devices. The Registry contains information that Windows continually references during operation, such as profiles for each user, the applications installed on the computer and the types of documents that each can create, property sheet settings for folders and application icons, what hardware exists on the system, and the ports that are being used. The Registry replaces most of the text-based .ini files that are used in Windows 3.x and MS-DOS configuration files, such as the Autoexec.bat and Config.sys. Although the Registry is common to several Windows operating systems, there are some differences among them.

How to fix unknown runtime error?

It is fairly simple. You must prevent it from ever showing up. You can do this by using a simple registry cleaner. The registry size keeps growing when you use Windows. When the registry becomes very large, your computer's performance will be decayed and unstable. Some computer users even spend a lot of time trying to go through the registry and edit it manually. Not only can this be a daunting task, it is also a risky one. RegistryEasy is a very easy to use tool, stuffed with useful features. It helps you clean your registry and keep it clean, while speeding up Windows and fixing dozens of errors.

Here is what it can fix:

- Windows Installer Errors
- ActiveX Errors

- Regain disk space
- Protects your privacy
- Easy to use, saving you time and energy
- Unlimited free technical support
- Prevents PC from Freezing or Crashing
- ActiveX Control problems
- Windows Startup Errors

- Corrupt Registry Files
- Task Manager related
- Computer & Application Shutdown
- RegistryEasy™ detects the most registry problems
- Cleans registry, fixes errors, and optimizes your PC for better performance
- Prevent application crashes
- Load windows faster
- Run applications smoothly
- Maintain your system like new
- Windows Explorer Errors
- Windows Media player Errors
- sass.exe , svchost.exe & other exe Errors
- Windows Operating System Problems
- Registry Errors
- DLL Errors
- Runtime Errors
- IExplore and System32 Errors
- System Crashes
- Slow PC Performance
- Chkdsk Issues
- Computer Freezing
- Internet Explorer Errors
- Javascript Errors
- Dr Watson Errors
- Hardware Malfunction

- Blue Screen
- Vista, XP, 2000, 98 and ME Issues
- Scan Disk
- Driver Errors
- Manage your Internet Explore more handle

Using a registry cleaner is a very recommended step for improving your computer performance and get rid of all windows annoying errors.
